SUPERSTORE SALES DASHBOARD

Power BI • Project Summary & Portfolio Brief

Project Overview

An interactive Power BI dashboard project designed to explore SuperStore sales data and communicate business performance through clear KPIs, trends, comparisons, and insights.

Objectives

• Monitor sales, profit, orders, and quantity sold.
• Track trends and compare categories and sub-categories.
• Compare regional performance and customer segments.
• Identify high- and low-performing products.
• Present practical, evidence-based business observations.

Recommended Dashboard Contents

Visual / KPI	Purpose
Total Sales, Profit, Orders, Quantity	At-a-glance performance
Monthly sales and profit trend	Understand changes over time
Sales by category / sub-category	Compare product performance
Sales and profit by region / state	Spot geographic patterns
Top and bottom products by profit	Find winners and loss-makers
Customer segment analysis	Compare buying patterns
Date, region, category, segment slicers	Explore the report interactively

Tools & Skills

Core: Power BI, Power Query, DAX.
Supporting: Excel, SQL, data cleaning, data modeling, visualization, business analysis, and explaining insights.

Suggested Workflow

1. Import the SuperStore CSV and inspect columns, types, missing values, and duplicates.
2. Clean and shape data in Power Query.
3. Create a model and DAX measures (Sales, Profit, Orders, Quantity, Profit Margin).
4. Build visuals and slicers; validate totals and interactions.
5. Document 3–5 evidence-based findings and save the .pbix.

GitHub Repository

Name: SuperStore-Sales-Dashboard
Description: Interactive Power BI dashboard to analyze SuperStore sales, profit, products, customers, and regional performance.

Recommended Files

• README.md
• SuperStore_Dashboard.pbix
• dashboard-preview.png
• Dataset CSV (only if sharing is permitted)
• .gitignore

Project Status

Use **In Progress** until the dashboard and findings are complete. Mark Completed only after validating and documenting the final report.
